

## **CISCO training programs**

### **CCENT™ (Cisco Certified Entry Network Technician).**

Cisco Certified Entry Network Technician (CCENT™) validates the ability to install, operate and troubleshoot a small enterprise branch network, including basic network security. With a CCENT™, the network professional demonstrates the skills required for entry-level network support positions – the starting point for many successful careers in networking. The curriculum covers networking fundamentals, WAN technologies, basic security and wireless concepts, routing and switching fundamentals, and configuring simple networks. CCENT is the first step toward achieving CCNA, which covers medium size enterprise branch networks with more complex connections. CCENT prepares you for an entry level IT support/Network Technician position who works with Cisco products.

Must have basic PC skills and working knowledge of the Internet, or completed CISS 121. Courses can be applied to the Cisco CCNA (Cisco Certified Network Administrator) Certification.

Take CISS 151 (Cisco CCNA 1) and CISS 152 (Cisco CCNA 2) and prepare for the CCENT. CISS 153 and CISS 154 will also be available for completion of your CCNA (Cisco Certified Network Administrator) certification. These are credit courses and are offered throughout the year. See the credit schedule at [www.lorainccc.edu](http://www.lorainccc.edu).

Questions about Cisco, contact Doug Huber at [dhuber@lorainccc.edu](mailto:dhuber@lorainccc.edu).
